

RHINO SHUTTLE™

DESIGNED TO PROTECT

**WHEN SAFE TRANSPORT FOR YOUR
KEY PERSONNEL IS CRITICAL
RHINO SHUTTLE™
IS THE ONLY CHOICE**

The RhinoSHUTTLE™ is a robust yet flexible vehicle that excels at personnel transport, traversing a wide range of threat environments including through urban zones of civil unrest. The armored panels and transparent armor are not visible to outside observers, thus reducing the vehicle's attractiveness to those of hostile intent.

The RhinoSHUTTLE™ construction, coupled with extensively tested and combat-proven armored protection, protects against hostile weapons fire. Armored protection is certified up to NIJ Level III /EN B6 including our transparent ONEWAY® Return Fire GLASS.

Armour Group's RhinoSHUTTLE™ is powered with the optional 6.8L V10 producing 305 HP. The RhinoSHUTTLE™ is based on the reliable and durable Ford 2012 ECONOLINE E-350 XL 12 passenger van. The result is high performance armored transport that combines the finest in practicality and protection.

Armour Group purchases the vehicles through the client's in-country Ford dealership. The benefit includes easy access to the full range of local service and spare parts in the countries where the vehicles operate and a full factory warranty.
